

WINTER WATER METER MAINTENANCE

Please check all outside hoses and faucets to make sure they are either turned off or well insulated and kept warm so they do not break during the winter months.

Water meters also need to be checked to make sure they are protected from the cold to prevent freezing. Your water meter is usually located in the basement, near where your plumbing comes into the home. Check this often to make sure that it is not leaking. If you discover a leak, please contact the borough office, as this is going to affect your water bill.

The borough has had to replace several meters in past years due to freezing and residents have had pipes break because of lack of heat. So, make sure that the meter is not subjected to the elements. If a meter freezes, you the customer are responsible for the replacement costs.
